CERAMIC

“Creation is the only eligible choice for a dental technician to create convincing, which means naturally appearing, restorations.”

Leucite-reinforced metal ceramic CC

CREATION CC –
technically refined – inspired by nature

Creation CC is a high- fusing metal ceramic with unique optical and physical properties that has developed constantly in line with growing aesthetic demands – **recognized worldwide for more than 35 years!**

The perfectly coordinated ceramic materials have excellent homogeneity and thus guarantee high flexural strength. The result: a densely sintered structure for **pure and non-porous layering** with the utmost reliability.

The pure potash feldspar with micro-pure leucite crystal structure in Creation CC creates iridescent light refraction and natural brilliance and enhances the strength. Exceptional colour nuances can additionally be created with the unique effect materials.
The ceramic bonder Crea Alloy Bond also acts as a CTE buffer between metal and ceramic – for improved adhesive properties to non-precious metal and greater colour reliability.
With the modular classic brand Creation CC, metal-ceramic restorations can be produced with impressive aesthetics and dimensional stability – for **superb dental artistry**!

Creation CC – natural brilliance and efficiency.

THE BRILLIANCE OF CREATION CC:

- **Unique, lifelike aesthetics thanks to highly pure potash feldspar**
- **Resilience due to consistently high flexural strength**
- **Natural colour effect and light dynamics due to leucite crystals**
- **Ease of handling thanks to consistent colour and layering system**
- **Processing reliability since 1988**

CC Creapast Kit | 000300

Complete paste oqaques with modifier

Crea Alloy Bond | 000080

Crea Alloy Bond is a bonding agent which was specially developed for neutralising leaking metallic oxides. At the same time it acts as an efficient CTE buffer between porcelain and metal alloy.

- Safety owing to high flexural strength (70 MPa)
- No marginal discolorations – staining metallic oxides are neutralised
- Greater colour reliability because of the golden yellow undertone
- Compatible with all materials from Creation CC and LF

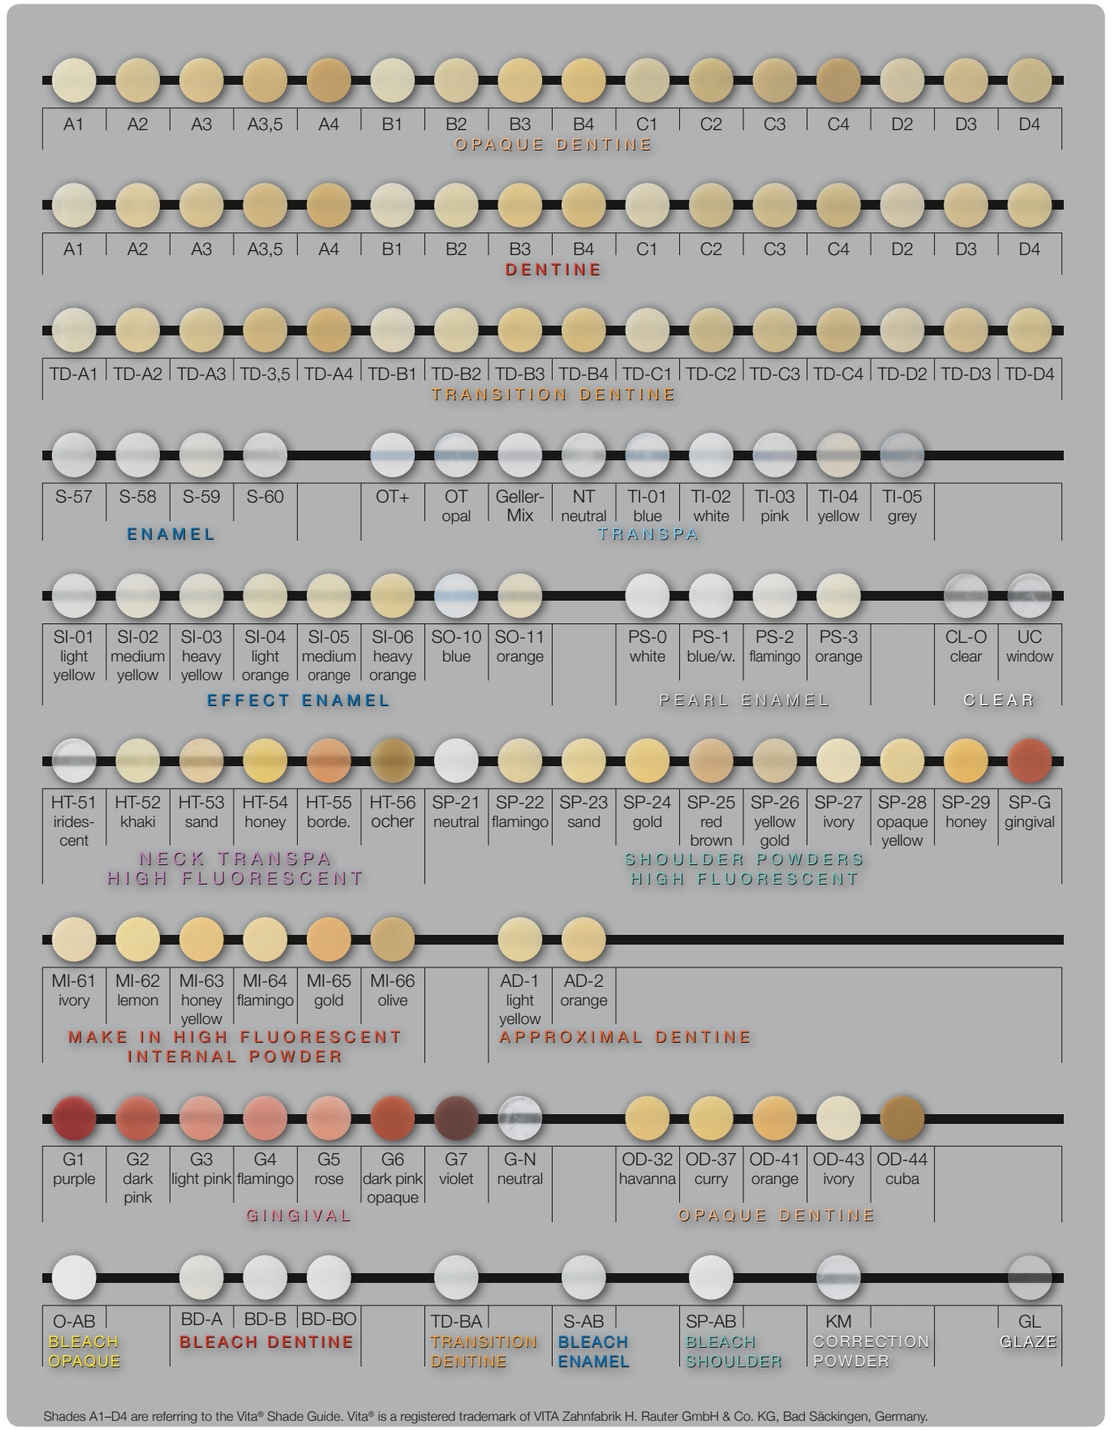

WOP Opaque

The coating of opaque can be carried out at only 950 °C instead of 980 °C with the WOP paste. This procedure is useful with certain high-gold alloys and galvanised frameworks. After the WOP coating the second coating of opaque is applied.

- Firing temperature 950 °C
