CREATION ZI-CT –
the fine art of ceramics

Creation ZI-CT is an innovative feldspar ceramic containing leucite crystals which is matched to the CTE of all high-strength zirconium dioxide frameworks and structures – whether white, coloured or translucent.
The high proportion of pure potash feldspars creates light scatter that is comparable to that of natural teeth and a **brilliant colour effect**, while the micro-fine leucite crystals improve mechanical strength and thereby ensure a **durable ceramic structure**.
Fascinatingly fluorescent: the special bonding agent Frame Shade NT guarantees strong adhesion to the zirconium dioxide framework and also increases its fluorescence – for **powerful bond strength** without tensile stresses.
The modular Creation ZI-CT allows restorative work on zirconium dioxide with impressive colour and dimensional stability and with **brilliant light reflection and dynamics**.

High-fusing, high aesthetics, high stability: Creation ZI-CT.

"Unobtrusively beautiful – a true Creation!"
Andreas Nolte, MDT

THE BRILLIANCE OF CREATION ZI-CT

- **Natural colour effect and light dynamics due to leucite crystals**
- **Excellent bonding strength thanks to high firing temperature of 910 °C**
- **Extremely low shrinkage for fewer correction firings and more efficiency**
- **Reliability due to homogeneous crystalline structure and high resilience**
